# 1. Introduction

---

## 1.1 Introduction

Tarago Operations Pty Ltd, a wholly owned subsidiary of Heron Resources Limited, holds Environment Protection Licence 20821 (EPL 20821) issued by the Environment Protection Agency (EPA) under the Protection of the Environment operations Act 1997 (the Act) and operates under the conditions of Project Approval 07\_0143MOD2 granted by the NSW Department of Planning and Infrastructure for the Woodlawn Mine Project. This report has been prepared to satisfy the reporting requirements of the Act as directed by the EPA and also for Condition 11, Schedule 6 of the Project Approval. These documents can be found on the Heron Resources web site.

This report summarises environmental monitoring results for the Woodlawn Mine for the period 1 – February 2022.

On 25 March 2020 Woodlawn Mine suspended operations and entered a period of care and maintenance (C&M). Environmental monitoring and reporting for air quality and will continue during the C&M period. As there are no noise emissions nor blasting operations being undertaken during care and maintenance, no monitoring for these activities was undertaken.

A summary of the EPL information is provided in Table 1. The EPL was first issued on 29 March 2017 and reviewed on 7 May 2018 and 18 January 2019. The EPL was last subject to variation on 16 February 2022. Links to the EPL are shown in [Table 1](#).

Table 2 summarises the frequency and units for monitoring data for the reporting period.

**Table 2. Supporting information of EPL monitoring requirements**

Parameter	Monitoring site	Monitoring frequency	Unit of measure
Air quality monitoring: Deposited Dust (insoluble solids)	DG 22*, DG28*, DG33* DG34	Monthly	g/m <sup>2</sup> /month
TSP	HVAS-1	24 hours every six days	µg/m <sup>3</sup>
PM10	HVAS-2	24 hours every six days	µg/m <sup>3</sup>

\*Monitoring undertaken by Veolia

## 1.2 Explanation of units of measurement

- **mg/m<sup>3</sup>** = milligrams per cubic metre
- **g/m<sup>2</sup>/month** = grams per square metre per month
- **µg/m<sup>3</sup>** = micrograms per cubic metre
- **Day** = 7am to 6pm Monday to Saturday and 8am to 6pm Sunday and public holidays
- **Evening** = 6pm to 10pm on any day
- **Night** = 10pm to 7am Monday to Saturday and 10pm to 8am Sunday and public holidays

## 1.3 Abbreviations

- TOP – Tarago Operations

## 2. Meteorological Monitoring

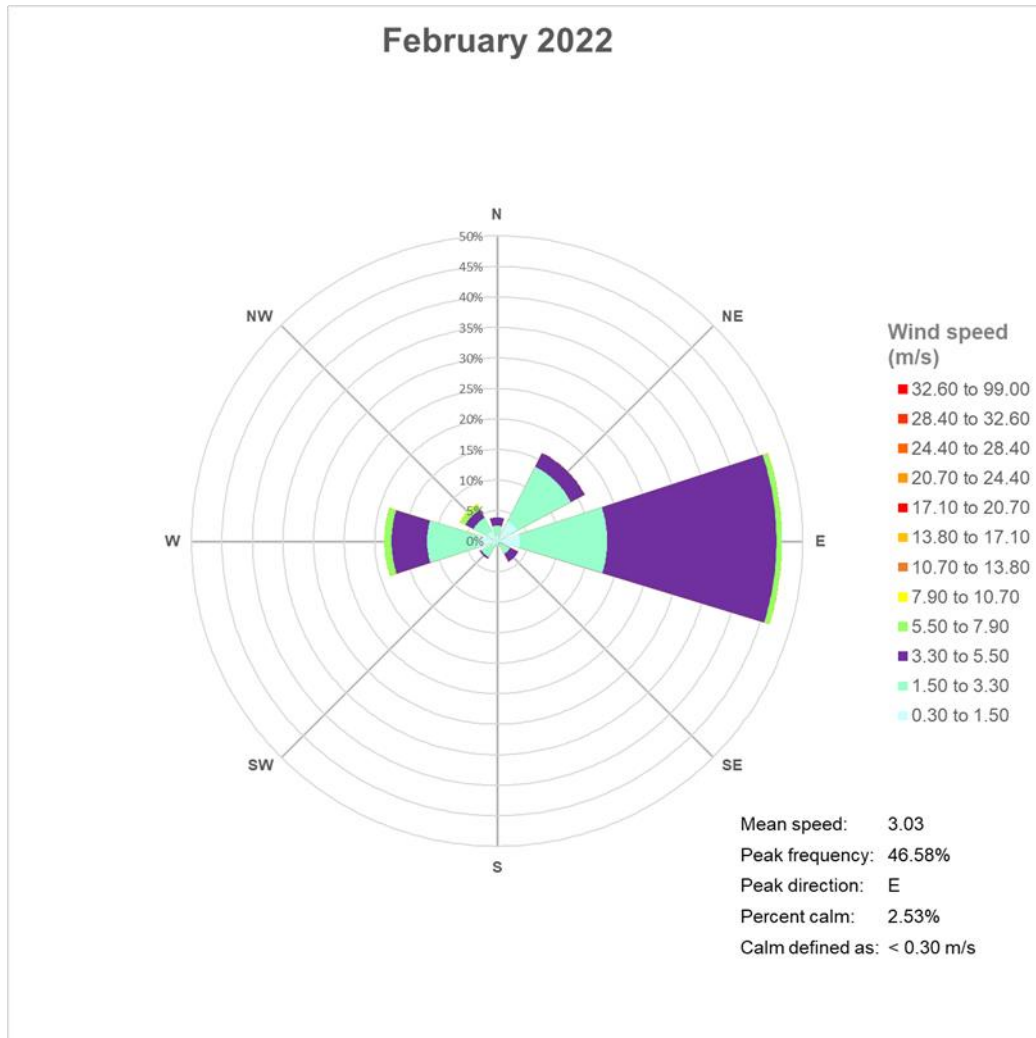

Heron is required to undertake meteorological monitoring on site. Veolia operate the approved weather station (EPA licence 11436, Monitoring Point 9). The detailed February 2022 daily weather data is shown in Table 3.

Table 3. Daily Weather – February 2022

Date	Temp min @ 10m (°C)	Temp max @ 10m (°C)	Rain (mm)	Number of wet days (total)	Weather station - Hours recorded (n)	Avg wind speed (m/s)	Avg wind direction (deg)	Evapo-transpiration (mm)
1	11.8	14.5	3.0		24.0	4.5	92.3	2.279
1	16.9	67.9	31.5		24.0	2.5	109.3	4.486
2	18.0	78.8	0.5		24.0	2.2	173.5	4.945

## 3. Air Quality Monitoring

---

---

The Air quality monitoring results for Woodlawn Mine are summarised in the following sections.

### 3.1 Depositional Dust

Depositional dust monitoring around the Woodlawn site is undertaken on a monthly basis. Four depositional dust gauges DG22, DG28, DG33 and DG34 are present to monitor the levels of depositional dust. They are located on Site as follows:

- DG22 – East side of void
- DG28 – Pylara
- DG33 – MBT plant
- DG34 – Behind core shed

The limits for deposited dust are outlined in the Project Approval. The limits are detailed in Table 4.

**Table 4. Deposited dust limits**

Pollutant	Averaging period	Maximum increase in deposited dust level	Maximum total deposited dust level (Australian standard Limit)
<sup>c</sup> Deposited dust	Annual	<sup>b</sup> 2 g/m <sup>2</sup> /month	<sup>a</sup> 4 g/m <sup>2</sup> /month

- <sup>a</sup> Total impact (i.e. Incremental increase in concentrations due to the project plus background concentrations due to all other sources).
- <sup>b</sup> Incremental impact (i.e. incremental increase in concentrations due to the project on its own)
- <sup>c</sup> Deposited dust is to be assessed as insoluble solids as defined by Standards Australia, AS/NZS 3580.10.1:2003: Methods for Sampling and Analysis of Ambient Air – Determination of Particulate Matter – Deposited Matter – Gravimetric Method.

Air quality results derived from the depositional dust gauges for February 2022 are shown in Table 5. The insoluble matter readings in DG22 and 34 indicate a high contribution by pollen, and this is consistent with the grass presence surrounding these two gauges. The ongoing high rainfall experienced across the region is contributing to very low levels of atmospheric dust. Ash content results confirm that a very low level of mineral matter is present in both gauges.

**Table 5. February 2022 DDG results**

DDG ID	EPL ID	Start date	End date	Insoluble solids (g/m <sup>2</sup> /month)	Rolling annual average (g/m <sup>2</sup> /month)
DG22	2	2 Feb 22	2 Feb 22	4.8	1.6
DG28	1	1 Feb 22	2 Mar 22	0.7	1.2
DG33	4	1 Feb 22	3 Mar 22	0.4	1.2
DG34	25	1 Feb 22	1 Feb 21	4.6	5.7

### 3.2 Atmospheric dust – particulate matter

The Project Approval requires monitoring of total suspended particulate (TSP) matter and particulate matter < 10µm (PM<sub>10</sub>) to ensure particulate matter emissions generated by the project do not exceed the criteria listed at any residence on privately owned land. High volume air sampling (HVAS) equipment for atmospheric monitoring was installed on 16 October 2017 at Pylara, the nearest

residence located to the east of Woodlawn Mine. Monitoring commenced on 17 October 2017 and is undertaken for a 24 hour cycle every 6 days.

The limits for TSP and PM<sub>10</sub> are outlined in the Project Approval. The limits are detailed in Table 6 and readings for February 22 shown in Table 7.

**Table 6. TSP and PM<sub>10</sub> limits**

Pollutant	Averaging Period	<sup>d</sup> Criterion
Total suspended particulate (TSP) matter	Annual	<sup>a</sup> 90 µg/m <sup>3</sup>
Particulate matter < 10 µm (PM <sub>10</sub> )	Annual	<sup>a</sup> 30 µg/m <sup>3</sup>
Particulate matter < 10 µm	24 hour	<sup>a</sup> 50 µg/m <sup>3</sup>

- <sup>a</sup> Total impact (i.e. Incremental increase in concentrations due to the project plus background concentrations due to all other sources).
- <sup>d</sup> Excludes extraordinary events such as bushfires, prescribed burning, dust storms, fog, fire incidents or any other activity agreed by the Director-General.

**Table 7. PM<sub>10</sub> and TSP results February 2022**

Date	PM <sub>10</sub>	PM <sub>10</sub> rolling annual average	TSP	TSP Rolling annual average
5 Feb 22	5.7	6.9	13.6	14.8
11 Feb 22	10.1	6.8	20.1	14.8
17 Feb 22	15.9	7.0	41.3	15.3
23 Feb 22	7.4	7.0	12.7	15.1

**Compliance summary:**

The PM<sub>10</sub> and TSP results for 24 hour period are within the criteria set out in the PA.

The annual average emissions are within the criteria set out in the PA.

## **4. Noise Monitoring**

---

Following the announcement that Woodlawn mine would enter a period of care and maintenance on 25 March 2020, and that as a consequence there was no operational activity undertaken during April, there were no noise emissions from the site. Consequently noise monitoring was not undertaken during February 2022.

## **5. Blasting**

---

Following the announcement that Woodlawn mine would enter a period of care and maintenance on 25 March 2020, and that as a consequence there was no operational activity undertaken during April, and there were no blasting activities. Consequently blast vibration monitoring was not undertaken during February 2022.

## **6. Complaints**

---

No complaints were received during the reporting period.
